

Potential Sources of Lead in Drinking Water

To find out for certain if you have lead in drinking water, **have your water tested.**

Reduce Your Exposure to Lead in Drinking Water

Use only cold water for drinking, cooking and making baby formula. *Boiling water does not remove lead from water.*

Regularly clean your faucet's screen (also known as an aerator).

Consider using an NSF-61 certified water filter to remove lead and know when it's time to replace the filter.

Before drinking, flush your pipes by running your tap, taking a shower, doing laundry or a load of dishes. For example, let the tap run for five minutes or until the water runs cold.

Replace brass fittings and fixtures that are older than 2013.

Identify Other Lead Sources In Your Home

Lead in homes can also come from sources other than water. If you live in a home built before 1978, you may want to have your paint tested for lead.

Consider contacting your doctor to have your children tested if you are concerned about lead exposure.
